EDUCATION

Seattle University

Sep 2024 - Jun 2028

Bachelor of Science in Computer Science; GPA: 3.5

Seattle, WA

RELEVANT COURSEWORK

- Data Structures (C++)
- Object Oriented Programming (C#)
- Database Systems (SQL)
- Computer Organization (Assembly)
- Foundations of CS (C++)
- Linear Algebra (Python)
- Design & Analysis of Algorithm
- Languages and Computation (Java)
- Computing Systems (Assembly) (Java)

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, SQL, Kotlin, C#, Assembly

Frameworks: React Native (Expo), React.js

Databases: PostgreSQL (Supabase), MongoDB

Tools: Git, GitHub, VS Code, Android Studio, Pandas, Matplotlib, Jira, Google Colab

Cloud/AI: AWS (Bedrock), Kaggle

Concepts: Data structures, OOP, debugging, troubleshooting, basic SDLC

EXPERIENCE

Software Engineer Intern

Jun 16 2025 - Aug 29 2025

Amazon (Alexa Customer Service)

Seattle, WA

- Built and shipped an internal Alexa Customer Service tool in **8 weeks** to streamline issue triage and resolution, improving agent workflow and reducing manual investigation steps.
- Integrated **AWS Bedrock** to generate fix recommendations and summarize customer issue context; improved reliability by adding guardrails (input validation, retries/timeouts) and reduced customer-impacting errors by **20%**.
- Triageed and tracked defects in **Jira**, coordinated fixes through code reviews, and optimized the workflow to reduce operational cost by **\$1,000**; wrote deployment and runbook documentation for support handoff.

Undergraduate Summer Researcher

Jun 15 2026 - Sep 11 2026

Seattle University

Seattle, WA

- Used **Python** in **Google Colab** to study skin lesion segmentation methods for medical image analysis.
- Worked with dermatology image datasets from **Kaggle** to explore preprocessing, segmentation, and evaluation workflows.
- Reviewed classical image processing and deep learning approaches to support research in computer vision for healthcare.

Esports Attendant

Nov 2025 - Present

Seattle University Recreation (UREC)

Seattle, WA

- Provided front-line technical support by troubleshooting **Windows** PCs, peripherals, and network issues during daily operations and events.
- Reduced downtime by diagnosing problems quickly, validating fixes, and coordinating with staff to keep stations ready for peak usage.
- Maintained inventory/equipment organization and delivered clear customer support to students and guests in a high-traffic environment.

PROJECTS

Hotel Booking Database System

Jan 2026 - Mar 2026

Database Systems Course Project, Seattle University

Seattle, WA

- Designed a relational database for hotel reservations and availability tracking; created ER diagrams and normalized schemas to improve data integrity.
- Developed and optimized **SQL** queries for search, booking workflows, and availability checks; verified correctness with representative test data.
- Collaborated in a team of four, contributing to technical discussions, documentation, and implementation decisions throughout development.
